Style Choices

I used a **semi-realistic anime–comic hybrid style** to create a modern, expressive visual identity for The Gulmohar Gang.
This style was selected because it:

- Allows strong emotional expressions
- Maintains consistent character faces across multiple poses
- Provides cinematic appeal suitable for storytelling
- Supports subtle Indian features without stereotypes
- Fits both character sheets and group scenes

The color palette is warm and muted to match the grounded feel of an Indian housing society environment.

Consistency Method

To keep all visuals consistent across turnarounds, poses, expressions, and the final group scene, I followed this workflow:

1. First generated **Hero Images** for all 5 characters.
2. Used these hero images as **reference inputs** for every other generation.
3. Used the same style block (“Master Style Bible”) for all images.
4. Maintained identical facial structure, hairstyle, proportions, and colors.
5. Generated poses, expressions, and turnarounds using controlled structured prompts.
6. Generated the final group scene by uploading **all 5 hero images together** to ensure size, lighting, and proportion consistency.

This ensured a production-ready, uniform visual style across the entire set.
